

From reusable capabilities to a validated benchmark

Construction defines the task; complementary checks support the frozen release.

CONSTRUCTION

Select capability

Reusable behavior
Inspectable source
Offline execution

Source + contract

Pinned source snapshot
API + behavior obligations
Scope + exclusions

Build evaluation

Protected tests
Contract mappings
Independent reference

Freeze release

200 tasks
176 repositories
182 source snapshots

VALIDATION

Automated checks

Source / asset consistency
API + behavior mappings
200 task checks

AI-assisted audit

Contract and test review
Repair-scope review:
38 tasks

Author review

Task and test semantics
Taxonomy + failure labels
Sample-based review

Reference replay

3 runs per task
600 / 600 passing runs
200 stable outcomes

Quality control combines AI-assisted review and author spot-checks; problematic candidates are excluded.
